

## **N.C. Drug Education Schools 2011-2012**

The N. C. Drug Education Schools provide a statewide system of schools empowered through N.C. General Statute to operate as an alternative to jail for persons with simple drug offenses. The goal is that as a result of completing the school, the student will be able to identify a personal plan reflective of an informed self-assessment, resulting in the elimination, avoidance and/or reduction of substance usage and related consequences, including recidivism. There is standardized information collected with each student who enters a Drug Education School.

This report reflects findings from this information obtained during the fiscal year 2011-2012 from the 1441 students recorded as enrolled in the state's Drug Education Schools that year. Key findings from the data are highlighted here for consideration in learning, growing, improving, and planning related to Drug Education Schools.

-----  
*Summary: Most DES students are single, white, and male in their teens or twenties who have completed 12 or more years of schooling. Slightly more than half of them have some form of employment. Most DES students pass their classes. Most students were referred to DES by*

## **Key Findings**
